EXPOSED AGGREGATE FINISHES

**Making
Exposed
Aggregate
Easy**

OutWest Exposed Aggregate

Exposed Aggregate is a very popular finish for concrete, this is produced by using decorative stones, colour oxides & cement. Before exposing & sealing the surface to achieve the required finish.

***Disclaimer**

Aggregates used in Exposed Aggregate Concrete are natural products and can vary in colour, shape and size. These variations can also change the shade of the concrete. The images are only indicative and illustrative of the type of finish to be achieved and no guarantee is given that the finished product will be identical to these images.

Applications

Driveways

The driveway is both a functional and aesthetic part of your home. It is the entry to your home and the first thing both you and your neighbours look at.

An exceptional driveway compliments its surroundings, its angles reflect those of the house, it compliments the soft landscaping (plants) and its colours compliment and add to the house.

Entertaining Areas

Flooring is the most basic element of your entertaining areas which will compliment your home permanently. We create a great range of versatile surfaces for your entertaining areas, An outdoor entertaining area is a fantastic addition to any home and one that can be used all year round.

Polished Concrete

Polished concrete is a generic term covering a range of options which leave the concrete surface exposed as the final finish. Quality sealer or coating is often applied which may impart a gloss appearance to the surface. A polished finish is achieved by grinding with progressively finer abrasives until the surface takes on a lustre of its own.

Pathways

Our products are used to produce great looking, high quality pathways. Concrete paved pathways are a great way to dress up an entry into your home, from coloured concrete exposed concrete and so on; a concrete pathway is a great way of keeping the entries to your home clean, neat and tidy.

Pools

There are many types or finishes of concrete that can be used around pools. The colour of the concrete and the mix of aggregates can be chosen to compliment the surrounding landscape. Lighter colours are generally used to open the area with the stone colours chosen to compliment features of the house or landscape.

That is brown and gold aggregates to compliment decking, or white neutral aggregates to compliment modern lines and neutral colours. An extensive range of concrete colours can be achieved to get just that right tone.
